

Key Features:

- Up to 3 front units connectable - custom composition of a wallstation is possible
 - Selecting baudrate via DIP switch or software - providing protection against unintended baud rate change as well as high flexibility
 - Integrated terminating resistor - no external resistor for CAN bus termination required
 - PCB terminal block for easy handling - dual terminal for daisy chaining
 - Status-LED - for local indication of connection to the CAN bus
 - Wide input voltage range for external supply voltage - 9 V DC up to 58 V DC
- Check the PWS manual and IRIS-Net documentation for more details

General Description:

The Programmable Wall Stations (PWS) are modular standard mount keypads for Electro-Voice NetMax systems. The PWS-C CAN coupler establishes the connection between the front units and the CAN bus. The PWS-C collects and transmits the activity of control elements of the connected PWS modules and sends messages via the CAN bus to controlled devices. The PWS-C also receives data via the CAN bus and displays it on the PWS modules. In this way, a bi-directional communication between the PWS control surfaces and the controlled devices is achieved via CAN bus.

Technical Specifications:

Supply Voltage (external voltage supply necessary):	9 ... 58 V DC
Supply Current:	20 mA @ 24 V DC
Power Consumption:	480 mW
Max. Line Length (CAN):	1000 m
Cable diameter (solid wire; flexible wire):	0.5...0.8 mm / 20-24 AWG; 0.2...0.5 mm / 20-24 AWG
Operating Temperature Range:	-5 °C ... 40 °C
Dimensions (W x H x D):	48 x 48.5 x 19 mm
Weight:	15 g

ON	-	-	-	Terminated
OFF	-	-	-	Not Terminated

Default values are highlighted.

Notes: The CAN Address must be unique for each device. The CAN bus must be terminated at both ends. The Baud Rate must be identical for all devices, in PROG mode it is preset to 10 kbit/s by default.
