EV (Electro-Voice®) LAUNCHES WEATHER RESISTANT (PI) VERSIONS OF HIGHLY SUCCESSFUL FRX+ LOUDSPEAKER SERIES AT NSCA

FRX+ Series Redesigned to Offer Weather Resistance

DALLAS, TX (MARCH 13, 2003): EV (Electro-Voice) is displaying the weather resistant version of the FRX+ Series of loudspeakers at NSCA, Booth #2109/2205/2306 and demo room C-1. Catering to the growing needs of sound contractors, the FRX+ PI brings weather resistance, enhanced aesthetics, performance and efficiency to fixed installation sound reinforcement applications where cost-effective low frequency pattern control is key.

The FRX+PI Series represents a significant step forward in terms of durability, weather resistance, and performance. The cabinets have been redesigned with a stronger, more modern looking radiused stainless steel grille to withstand harsh weather environments. The popular L-track rigging has been retained while the old T-nut pull back points have been replaced with heavy gauge steel internal L-brackets. Further application of Electro-Voice® RMD® (Ring Mode Decoupling®) technology has resulted in new medium-format high frequency horns with outstanding vocal clarity while retaining the popular fully horn-loaded coaxial format. A totally new crossover network produces smoother response, better off-axis performance and superior HF driver protection. Passive to bi-amp changeover is now easily accomplished by moving a single connector. In addition, the DL15X woofer has been specially fine-tuned to produce +2 dB greater sensitivity through the all-important mid-bass region.

The FRX+ Series includes the following models:

- **FRX+640PI** – 15-inch, 2-way, 400-watt, 60° x 40° HF horn
- **FRX+660PI** – 15-inch, 2-way, 400-watt, 60° x 60° HF horn
- **FRX+940PI** – 15-inch, 2-way, 400-watt, 90° x 40° HF horn
